

The Agresso QLF Web Portal has been introduced as a means of delivering the desired distributed access using browser-based technology. It is more appropriate to the needs of occasional users, extremely flexible yet simple to deploy and conforms to all the business rules and restrictions defined within the core Agresso QLF system

The main element of the Agresso QLF Web Portal is a series of Web Parts, each of which provides a piece of functionality in much the same way as a Workbench in core Agresso QLF does.

Restricting Access

The ability to define access permission for users is a key part of devolving the finance portal. System administrators can define the options that different workgroups have access to on the finance portal menu. A departmental administrator maybe able to access all options where as a budget holder may just have access to authorise purchase requests and budget enquiries.

The terminology used can be changed, for example general ledger enquiry can be renamed budget enquiry
